Table tennis	32

Since 2011, Kenguru Pro
has been manufacturing
and installing modern
street sports equipment.

Calisthenics/street workout parks give everyone the opportunity to keep themselves in excellent physical shape. All you need is the desire to train. In calisthenics, you use your own body-weight, which makes the risk of injury minimal. Training on horizontal and parallel bars is suitable for both men and women, the elderly and children. As these parks have become a place for joint training, not only amateurs, but also professional athletes—boxers, swimmers, footballers, runners—come together in this one place. Here they can improve their general physical condition, which is necessary in any type of sport.

Kenguru Pro presents a
new range of Kenguru
Design street equipment.

The swing frame is made of metal I-beams. This structure has a 6 times higher safety margin than required by standards. Safety, durability and design are the main criteria we swear by when designing and manufacturing our products. Kenguru Design Swings—Form with a purpose.

Decorative wood design brings lightness and a natural feel to the structure. The swing set comes with additional safety chains. All chains are made of high-performance stainless steel. Kenguru Design Swings form an excellent objet d'art in any street space or favorite spot where both children and adults come to relax.

The type of wood to be used is agreed upon individually with the customer

Our engineers developed the Kenguru Design Street lights using I-beams to resemble the style of other Kenguru Pro products.

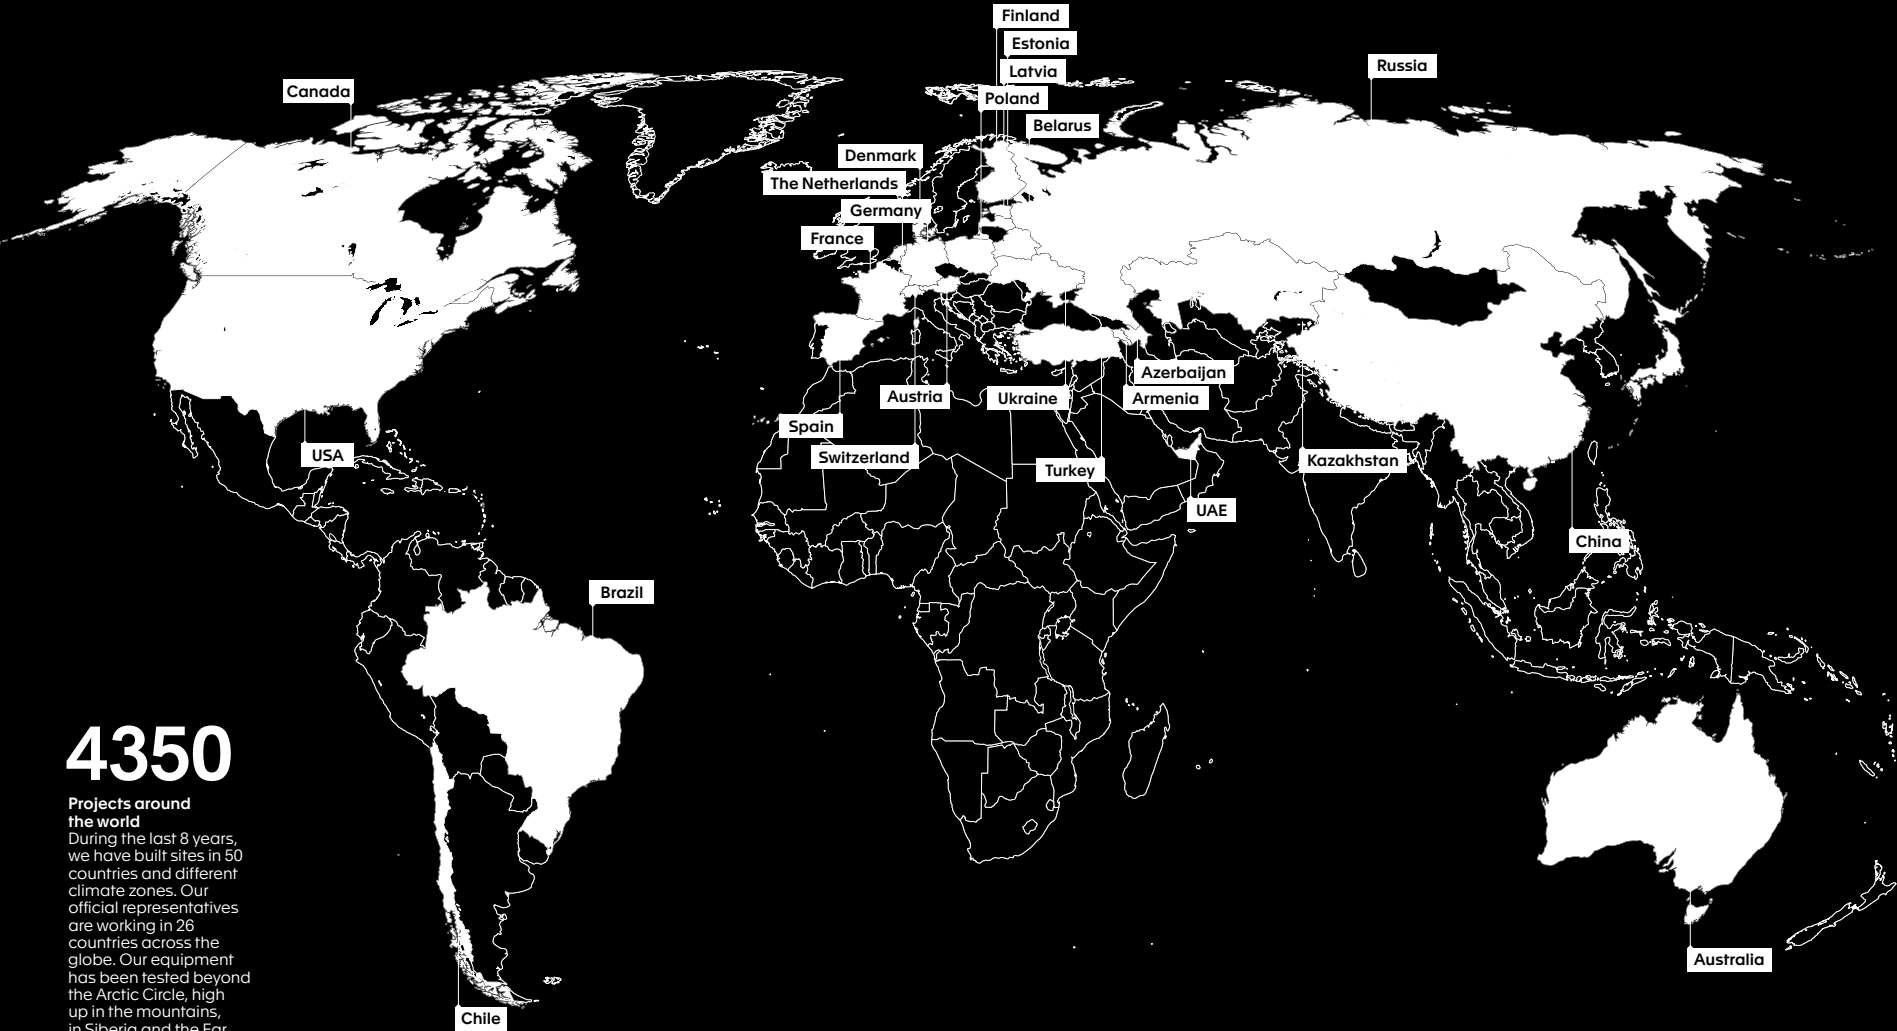

Street lights

**Projects around
the world**

During the last 8 years, we have built sites in 50 countries and different climate zones. Our official representatives are working in 26 countries across the globe. Our equipment has been tested beyond the Arctic Circle, high up in the mountains, in Siberia and the Far East, as well as on the hot seacoasts in France, Spain and Australia.

Kenguru Pro

Our factory is located in Riga, Latvia.

In-house production and warehousing allow us to have a stock of standard equipment in the stock—deliveries take 1-2 working days from the moment of payment.

In 2018, we revamped our production base with completely new and cutting-edge machines and painting and shot blasting chambers. The specialists working in them improve their professional skills at workshops held by relevant manufacturers every year.

In addition, they undergo internal training and pass quarterly tests to maintain their qualification.

In production, we use modern metal processing technologies—shot blasting, application of zinc-rich paint, powder painting—and modern materials: HPL plastic, wood-polymer composites, and ABS plastic.

In 2019, we started using hot-dip galvanizing

equipment to immerse shot blasted metal products into a molten zinc bath.

Advantages of the hot-dip galvanizing method:

- Vandal-proof. In case of local damage, the corrosion does not spread to adjacent areas;
- Environmental resistance, i.e. rain, Sun, fog, temperature variations, or sea mists;
- 25-year warranty.
